EDUCATION

National Institute of Technology (NIT) Jalandhar
Bachelor of Technology (B.Tech)

2021 - 2025
CGPA: 7.58/10

SKILLS SUMMARY

- **Languages:** Python, SQL, C/C++
- **Libraries, Tools & Frameworks:** FastAPI, PyTorch, Tensorflow, Flask, Scikit-Learn, Pandas, OpenCV, Langchain, Chromadb, Pinecone, FAISS, HuggingFace, Streamlit, SQLMesh, Pydantic, Celery, Docker

EXPERIENCE

Clinikally (YC S22) (Gurugram, India)
SDE-1 (Backend)

Oct 2025 – Present

- Built **compass** end-to-end, a FastAPI search-and-discovery service handling **100K+ daily active users** with product search, browse, autosuggest, and personalized recommendations by integrating Unbx'd/Netcore & Medusa.
- Developed APIs for real-time order tracking, fulfillment, and shipment status updates and integrated **Shipway** webhooks. The endpoints were to be used for the app's order listing, detail and tracking pages handling thousands of user requests.
- Built a custom medusa collections module with data models, migrations, admin APIs, workflows, validation, and dashboard UI for managing product collections.
- Built **Matrixify**, a bulk CSV import/export system for **Medusa** with **Redis**-backed async jobs, reducing manual catalog operations while saving **\$200/month** by replacing a paid Shopify extension.

Clinikally (YC S22) (Gurugram, India)
Product, Data & AI Intern

Jul 2025 – Sep 2025

- Built a python based catalogue auditing pipeline using Perplexity's Sonar API to **flag scientific and factual inconsistencies in product details**, leveraging **asynchronous programming for scalability**.
- Wrote SQL queries to transform raw Shopify data in BigQuery into clean, business-ready models powering business dashboards and reporting built on Metabase.
- Enhanced a multi-agent chatbot system by **performing prompt engineering to improve response flow**, **migrated OpenAI clients to Azure hosted OpenAI models to cut latency by 30%**, and wrote python scripts for synthetic dataset generation and agentic evaluation using LLM-as-a-judge.
- **Built a Python-based ETL pipeline for data migration** from Shopify to Medusa database, creating field mappings between schemas and **implementing asynchronous AI-powered tag generation for the entire product catalog** to enhance filtering and search accuracy.

Webkype (Noida, India)
Machine Learning Intern

Jun 2024 – Jul 2024

- **Developed an AI-powered customer support chatbot using RAG** that retrieved relevant sections from product manuals/FAQs and routed uncertain queries to human agents (as fallback mechanism), **reducing resolution time by 50%, lowering drop-offs, and boosting customer satisfaction (CSAT)**.
- Worked with modern GenAI tools such as LangChain, Streamlit, and ChromaDB to build and deploy the chatbot.

PERSONAL PROJECTS (SIDE GIGS)

- ML Systems & Paper Implementations - Built a collection of **from-scratch implementations of classical ML algorithms, Transformers, modern LLM techniques, and research papers** in PyTorch, including fine-tuning, multi-agent LLM systems, and model optimization, achieving up to **91.3% accuracy** while reducing model size by **52%**.

- Automated Email Generation using Vector DB and Meta's Llama 3.1 - Built a Streamlit application that extracts job details from URLs and generates tailored cold emails. **Implemented web scraping** to extract job descriptions, **used ChromaDB for semantic similarity search** to match relevant past work, and **Meta's Llama 3.1 to generate personalized emails**.
