Summary:

DevOps Engineer and SRE with expertise in scaling AWS, GCP and Azure infrastructure, Kubernetes, optimizing containerization, CI/CD, and cloud monitoring. Skilled in NewRelic, Datadog, Prometheus/Grafana, Terraform, and cloud platforms, I drive performance and minimize downtime while aligning technology with business goals. Experienced in adopting an "automate everything" mindset, ensuring cost optimization (FinOps), and improving infrastructure observability.

Experience:

 **DevOps Engineer**
Clinikally (Y Combinator S22)
June 2025 - Present

Building the robust, scalable, and reliable infrastructure for India's prominent digital health platform, delivering personalized dermatology and wellness solutions.

Breakthroughs:

- Built and scaled cloud infrastructure from scratch on AWS — provisioning Kubernetes (EKS), implementing RBAC, autoscaling (HPA/KEDA), and production-grade deployment architecture.
- Designed end-to-end CI/CD pipelines (Jenkins, Helm) for backend services and mobile (iOS) — enabling automated, reliable deployments and faster release cycles.
- Developed an in-house OTA update system for React Native bundles — allowing mobile teams to push hot updates without app store releases, significantly improving deployment agility.
- Implemented data pipelines including CDC to BigQuery (Metabase) and ETL workflows via Azure Data Factory for ERP (Dynamics 365) — enabling real-time analytics and data-driven operations.

 **DevOps Engineer**
va2pt.com
February 2024 - June 2025

Spearheaded major client projects, orchestrating critical DevOps & SRE engagements for a diverse portfolio of organizations. Expertise includes cloud migrations, advanced automation workflows, AWS, GCP, Kubernetes, CI/CD, scaling, reliability engineering, observability, incident management for performance tuning and Cloud FinOps to deliver significant cost efficiencies while aligning tech with real business impact.

Breakthroughs:

- Deployed microservices & event-driven apps across AWS & GCP (EC2, ECS, EKS, GKE) using CI/CD (Jenkins, GitHub Actions, CodePipeline, Bitbucket) — enabling faster and more reliable deployments.
- Implemented event-driven architectures (EDA) using decoupled microservices and asynchronous workflows — improving system scalability and throughput.
- Built scalable EDA systems with decoupled microservices & async workflows, provisioned production-grade environments via Terraform (IaC) — enhancing scalability, throughput, and stability
- Led AWS migrations with zero critical downtime and implemented observability stacks (Prometheus, Grafana, NewRelic, SumoLogic, CloudWatch) with SRE practices (SLIs/SLOs, alerting): enabling real-time incident detection and response aligned with SRE practices.
- Reduced cloud costs by ~40% through right-sizing, autoscaling, spot usage, and eliminating idle resources — leveraging cloud FinOps practices for cost optimization.

Education & Certifications:

 **Bachelor's of Computer Application (B.C.A)**
June 2023-26 Indira Gandhi National Open University

 **AWS Certified Cloud Practitioner**
Nov-2024
[Certificate URL](#)

Skills:

- Cloud Platforms:** AWS, GCP, Azure
- Containerization & Orchestration:** Docker, Kubernetes, EKS, GKE, ECS
- CI/CD Tools:** Jenkins, GitHub Actions, BitBucket Pipeline, AWS CodePipeline
- Infrastructure as Code (IaC):** Good understanding of the IaC principles and tools like Terraform, CloudFormation
- Monitoring Tools:** NewRelic, Datadog, Prometheus/Grafana, AWS CloudWatch, SumoLogic
- Networking:** Super strong understanding of TCP/IP networks, troubleshooting connectivity issues
- Programming & Automation:** Write orchestration code, automating pain points using Python, Bash
- Technical Documentation:** Logging changes, writing procedures, and instructions using wikis
