Education

Qualification	Institute/Board	Year
IMSc	Birla Institute of Technology, Mesra (CGPA: 7.6)	2021–2026
Senior Secondary	Blue Bells JR College, Nanded	2018–2021

Technical Skills

- **Languages:** C++, Java, TypeScript, JavaScript, Python, HTML/CSS, Solidity
- **Frameworks & Libraries:** React Native, Node.js, Medusa.js, Express.js, Fastify, Expo
- **Databases & Tools:** MongoDB, PostgreSQL, Redis, Docker, Git, CI/CD, Firebase, AWS, Azure, GCP
- **Technologies:** WebSockets, REST APIs, Sentry Logger, JWT, BullMQ, Cloudinary, FCM, Solana Web3.js
- **Architecture & Systems:** System Design, Unit Testing, State Machines, Polling Systems, Payment Orchestration, Real-time Systems
- **AI-Assisted Engineering:** Claude, Cursor, Prompt Engineering, AI-assisted Testing, Debugging, Refactoring, Architecture Validation

Work Experience

- **Clinikally (Y Combinator S22)** [\[App Store\]](#) [\[Play Store\]](#), Software Development Engineer Intern *June 2025 – Present*
 - Served as a core developer building the mobile application from scratch (0 → 1) in React Native, leading to its successful production launch on the iOS Apple App Store and Android Google Play Store.
 - Spearheaded the migration of the e-commerce backend from legacy Shopify to a custom headless commerce architecture (Medusa.js, Node.js, PostgreSQL), improving checkout performance and recommendation pipelines.
 - Designed and integrated a secure, high-reliability payment orchestration layer using JusPay HyperSDK (supporting UPI, Cards, NetBanking, COD) with automatic retry logic and asynchronous payment state reconciliation.
 - Architected multi-step, state-driven consultation workflows using Redux Toolkit, and built scalable REST APIs using PostgreSQL and Redis for real-time doctor availability booking and slot synchronization.
 - Integrated Sentry for real-time error logging and performance monitoring, facilitating rapid debugging and hot-patching of production exceptions to ensure high application uptime.
 - Introduced and configured unit testing using Jest for the mobile application, leveraging AI-assisted workflows (Claude, Cursor) to accelerate test suite creation, code reliability, and release cycles.
- **Sigfyn**, Software Development Engineer Intern *May 2024 – March 2025*
 - Contributed to a mission-critical fintech application managing **58 CR+ Rupees** in assets using React Native, Node.js, and MongoDB, serving thousands of active users.
 - Designed and implemented admin dashboard with RESTful API backend for internal operations, user management, and data analytics.
 - Implemented real-time price updates using WebSocket connections and Node.js, providing live market data to clients with sub-second latency.
 - Integrated Google Analytics and Firebase Analytics for user behavior tracking, and configured Firebase Cloud Messaging (FCM) for push notifications.
 - Leveraged AWS EC2, S3, and Azure cloud services to enhance application scalability, reliability.
 - Developed key features highlighted in marketing campaigns and Google Play Store banner, contributing to 4+ star rating with 10,000+ downloads.

Projects

- **Order Execution Engine for Solana DEX** *Node.js, TypeScript, Fastify, Solana Web3.js, Redis, PostgreSQL, BullMQ, WebSockets, Docker* [Github](#) [Postman](#)
 - Engineered high-performance order execution system using Node.js and TypeScript with intelligent routing between Raydium and Meteora DEXs, optimizing trade execution and minimizing slippage.
 - Implemented real-time WebSocket API for order lifecycle tracking and built concurrent processing system using BullMQ job queue and Redis cache with rate limiting support.
 - Developed microservices architecture with parallel quote fetching, best-price selection algorithm, and PostgreSQL database for comprehensive audit trail and transaction history.
- **OTT Platform - NewZen Play** *Jan 2023 – Apr 2023* [Github](#)
 - Developed scalable Node.js backend for OTT streaming platform with JWT-based authentication, secure video upload pipeline using Multer middleware, and Cloudinary CDN integration for content delivery.
 - Designed and implemented RESTful APIs using Express.js and MongoDB for user management, content metadata, subscription handling, and video streaming with optimized database queries.

Leadership & Activities

- **Google Developer Student Club**, Member *April 2023 – Present*
 - Organized workshops, hackathons, and technical events to foster innovation and collaboration among students.
- **Team Aveon Racing**, Management Member *January 2022 – Present*
 - Managed club operations including organization, teamwork coordination, and website management.
